Introduction

This document describes the Competency Framework for endorsement as a Consulting Surveyor as prescribed under section 39 of the Surveyors Act 2003.

The competency framework describes the competency Units, Elements and Descriptors that are required to be met for endorsement as a Consulting Surveyor. The competency framework describes the performance that the applicant is required to display. Competency is developed through the appropriate combination of qualifications, skills, knowledge and experience.

Definitions

Unit of Competency (Unit): A major segment of the overall competency of a profession, typically representing a major function, role or field of activity.

Element of Competency (Element): A subdivision of a unit of competency into an observable function or activity.

Performance Criteria (Descriptors): An indicative list of the aspects of professional performance that would be regarded as evidence of competent professional performance in the work place in an element of competency.

With Guidance: The performance of the descriptor is achieved by the applicant under the direction of a competent supervisor. The applicant need not be able to perform the activity without requesting help in planning and execution.

Under Supervision: The performance of the descriptor is achieved by the applicant without direct supervision of each step; however the result of the activity cannot be used unless it has been checked by a competent supervisor.

Interpretation of the Framework

The competencies for Consulting Surveyors will be typically demonstrated by experienced professional surveyors practising in any sector of the market who are able to manage a business providing surveying services to the public.

They must be able to demonstrate that they are competent to manage the interests of their staff, their client/s, and the public at large and, if applicable, any statutory authorities, insofar as those interests are affected by the operations of the business entity or entities that they represent.

They will have demonstrated sound technical competence and management skills during their years of professional experience.

Surveyors at this level will accept responsibility for all professional work undertaken within their areas of expertise. However, they must recognise complex or critical situations where professional guidance is required. Professional Surveyors will be expected to progressively develop their levels of competency and accept a commensurate increase in professional responsibility.

Competency Requirements for Consulting Surveyor Endorsement

An applicant will need to demonstrate competency in the following Units:

- Unit 1: Professional Practice
- Unit 5: Business Management and Supporting Quality Assurance Programs
- Unit 6: Communications
